IMMERSIVE LEARNING ENVIRONMENT

LAB: PHYSICAL SECURITY

LEARNING OBJECTIVE

The objective of this lab is for students to gain knowledge on Physical Security concepts. This document provides basic essential knowledge on important components of Physical security such as access control, surveillance and testing.

DESCRIPTION

The objective of Physical Security is to safeguard personnel, information, equipment, IT infrastructure, facilities and all company assets. Examples of threats that physical security protects against are unauthorized access into areas and theft of mobile devices.

Attackers can gain entry into secured areas through tailgating, hacking into access control smart cards or breaking in through doors. Defenses for these threats include physical intrusion detection systems, alarm systems, and man traps.

Mobile devices such as laptops, USB drives and tablets are easy targets because of portability.

COMPONENT SECTIONS

- Game file/folder name: Game
- Movie file name: movie
- Power Point file name: Physical Security.ppt
- Assessment file name: Physical Security Quiz.doc

WHAT TO SUBMIT

Submit the quiz document by answering all the questions.
